

The Three Tiers of Access:

1. **The Super Admin (You/Owner): * Dashboard:** "The Control Center."
 - o **Purpose:** You see *all* schools. You can activate/deactivate a school's subscription, see total revenue, and manage global system updates.
2. **The Tenant Admin (The School Principal/Owner): * Dashboard:** "The School Management System."
 - o **Purpose:** They only see *their* school. They manage their own teachers, students, and classes (the screens we've been building).
3. **The End Users (Teachers/Students/Parents): * Dashboard:** "The Portal."
 - o **Purpose:** Teachers mark attendance; students view grades.

1. Your Role as Super Admin

As the Super Admin, your workflow for registering the first customer looks like this:

1. **Create the School:** You enter the School Name (e.g., "Saint Mary's School").
2. **Create the Root Admin:** You enter the email/phone of the Principal or Owner of that school.
3. **Set Subscription:** You decide if they are on a Trial, Basic, or Pro plan.
4. **Issue the Keys:** The system generates the `school_id` and sends an OTP/Welcome invite to that Principal.

B. The Onboarding Modal (The Fix for Step A & B)

When you click "Create New School," it should trigger a multi-step process:

- **Step 1:** Basic School Info (Name, Address, Logo).
- **Step 2:** Admin Setup (Name, Phone, Email of the School's first user).
- **Step 3:** Automatic Provisioning (The frontend calls `POST /api/v1/schools`).

Phase 2: The Super Admin Setup (Example Data)

We need to create the "World" first.

1. **Login as Super Admin:**
 - o Phone: 919999999999 (The number you inserted in SQL).
 - o **Goal:** Ensure you land on `/platform`.
2. **Create School A:**
 - o Name: "**Greenwood Academy**".
 - o Action: Use the "Create School" button in the Platform UI.
3. **Create School B:**
 - o Name: "**Highlands International**".

- o Action: Use the "Create School" button in the Platform UI.
 - 4. **Create/Link Management User:**
 - o Phone: 918888888888.
 - o **Crucial Step:** Since your UI might not support "Multi-link" yet, ensure this user is linked to **both** schools in the user_schools table (you can do this via your "Manage Staff" UI if it supports it, or one quick SQL insert).
-

Phase 3: The Management Test (The "Magic" Moment)

Now we test the multi-school selection.

1. **Logout** from Super Admin.
 2. **Login as Management:**
 - o Phone: 918888888888.
 3. **The Redirect:**
 - o After OTP, you should automatically land on /auth/select-school.
 - o **Goal:** See "Greenwood Academy" and "Highlands International" cards.
 4. **Enter School A:**
 - o Click "**Greenwood Academy**".
 - o You should land on /management.
 5. **Create Data in School A:**
 - o Go to "Manage Classes" -> Create "**Class 10-A**".
 - o Go to "Sections" -> Create "**Section Blue**".
 - o **Verification:** Check Network Tab. The API call should be POST /classes?school_id=1.
-

Phase 4: The Switch & Isolation Test

This proves the schools are separate.

1. **Switch School:**
 - o Use the "Switch School" button (or manually go to /auth/select-school).
2. **Enter School B:**
 - o Click "**Highlands International**".
3. **Verify Data Isolation:**
 - o Go to "Manage Classes".
 - o **Goal:** The list should be **EMPTY**. You should NOT see "Class 10-A" here.
4. **Create Data in School B:**
 - o Create "**Class 12-C**".
5. **Final Check:**
 - o Switch back to School A. Verify "Class 10-A" is still there and "Class 12-C" is gone.

Summary of Example Data for your test:

User Role	Phone	Action	Result
Super Admin	919999999999	Create 2 Schools	Admin of Platform
Management	918888888888	Pick "Greenwood"	See/Create Greenwood data
Management	918888888888	Pick "Highlands"	Greenwood data is hidden
